"A PRETTY LAWN IS SUCH A NICE THING TO HAVE AROUND THE HOUSE"

Backed By Over 50 Years Experience And Satisfaction

We offer you the BEST IN LAWN MIXTURES for the Purchase Area. We formulate our own mixture for our own area. We take pride in our selection of special turf grasses from the best domestic and imported seeds. The least expensive item in any lawn is the seed. The very best lawn grasses cost so little more.

PLANTING DIRECTIONS

When to Plant Your Lawn

The finest lawns are made during the cool months in fall and spring.

PREPARE SOIL WELL

Spade or plow soil 8 inches deep. Remove rocks, roots, and litter. Where shady, there is frequently moss, showing lack of fertility, acid condition and poor aeration. To correct this apply agricultural limestone (100 lbs. per 1,000 sq. ft.) Add at least one bale of peat moss per 1,000 sq. ft. to sandy or clay soils. Work in well with a potato fork before applying fertilizers. Apply 50 lbs. Milorganite and 25 lbs. of 10-6-4 Verta-green Turf Builder to each 1,000 sq. ft. (50'x20'). Rake in thoroughly, mixing fertilizer with soil and working the September with Milorganite organic fertilizer, 30 lbs. per 1,000 sq. ft.

SEEDING THE LAWN

Most grasses, except Hulled Bermuda, Merion Blue Grass and Rye Grass Are seeded at the rate of 3-5 lbs. per 1,000 sq. ft. See special seeding rates of individual grasses below. Broadcast seeds evenly by hand or with the use of a seeder. Firm with a roller or drag lightly and smoothly with the back of a rake, and water thoroughly. Do not cover over one-fourth inch.

LAWN MAINTENANCE

Always keep newly seeded lawns well watered to insure good germination and quick rooting. Make first mowing when grass is 2 inches high setting mower to cut at 2 inches. Feed lawns in March and September with Milorganite organic fertilizer, 30 lbs. per 1,000 sq. ft. In dry weather, water lawns thoroughly with a rotary or oscillating sprinkler, soaking ground to a depth of 4 inches or more.

NEW VARIETIES OF KENTUCKY BLUE GRASS

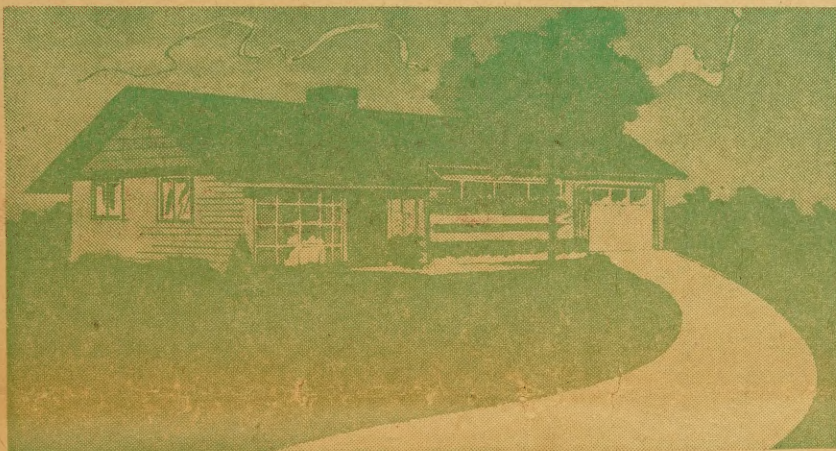

PARK KENTUCKY BLUEGRASS. This new variety comes up quicker and grows more vigorously than any other blue grass. Very rust-resistant and its rapid growth helps fight crabgrass and other weeds. 1 lb. sows 3-400 sq. ft. Order early. The combining of these five perennial grasses gives you a more active growing lawn over a longer time. For an extra heavy turf, dark green lawn that stays green, stands closer mowing, is drought and disease resistant. Plant this mixture with confidence. 1 lb. sows 500 sq. ft. 1 lb., \$1.95; 5 lbs., \$9.75; 10 lbs., \$19.25; 25 lbs., \$47.50.

California Wonder

PEPPERS

Need long growing season: start indoors 8 weeks before plants are wanted. Set plants 15"x24" and feed liberally for bigger fruits. Warm, mellow soil in sheltered location is best. Cultivate regularly, drawing soil up around stems. When plants are 7" to 8" tall, hoe in light dressing of commercial fertilizer. Do not plant hot peppers near sweet; they are apt to cross. 1 oz. pepper seed usually makes 1,000 strong plants.

SUPER-SAFE MULTI-CROSS... BRED ESPECIALLY FOR KENTUCKY... ASSURES COMPLETE POLLINATION

Super-Safe Multi-Cross 700A has a wide range of adaptability and pollinates over a period of from three to four weeks because it has bred into it seven inbred lines instead of the usual four in other hybrids. QUESTION: Should I treat my corn land as insurance against soil insects?

ANSWER: Most universities in the corn belt now recommend general soil treatment, either row or broadcast application, for corn. Aldrin granules, or its equivalent, has resulted in an average increase of over 700 plants per acre in treated over untreated areas in the same fields. These results are from three years of tests on 49 different fields. They consider that a gain of 350 plants per acre, at current prices, will pay for the chemical and application costs. This is inexpensive insurance with a 100% investment return.
